

# Springfield to Quantico Enhanced Public Transportation Feasibility Study

Technical Advisory Committee Meeting #4  
February 18, 2021

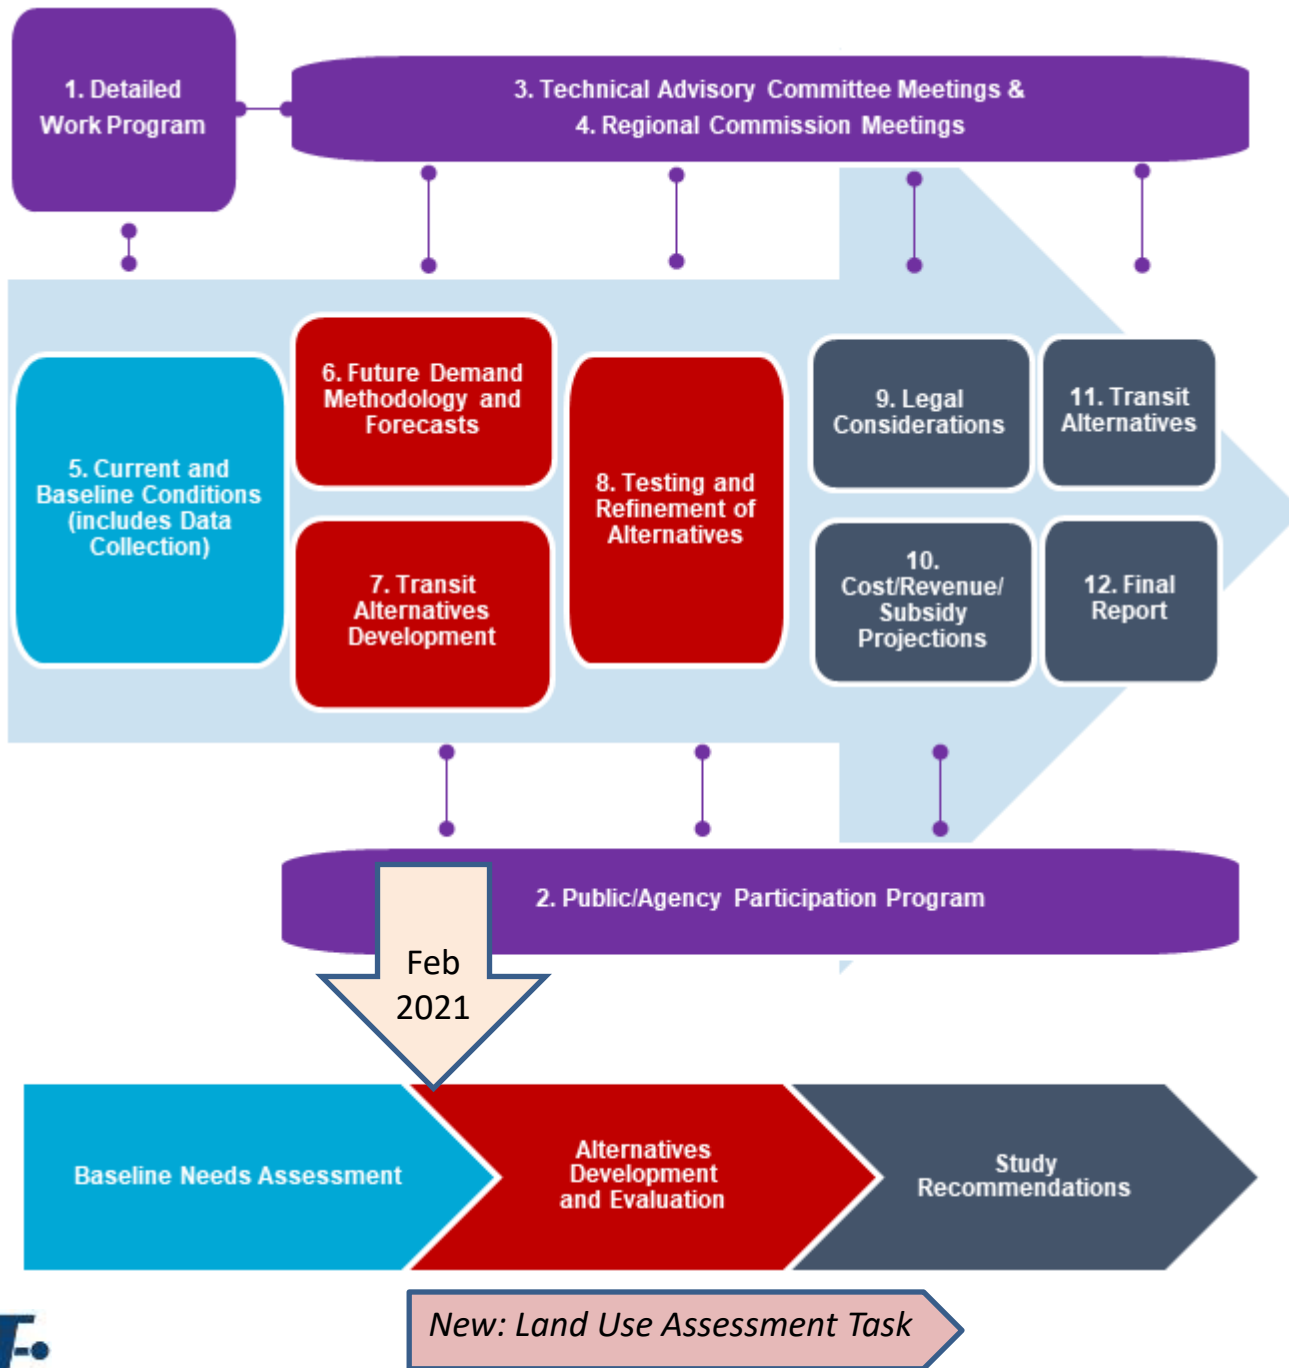

Virginia Department of Rail and Public Transportation

# Meeting Agenda

---

- Introductions / Welcome
- Meeting Objectives
- Needs Assessment Discussion
  - Introduction / Poll
  - Breakout Sessions
- Public/Stakeholder Outreach
- Alternatives Development Process
- Next Steps – Future TAC Meetings

# Land Use Assessment Task

---

## Objectives:

1. Assess extent to which the existing and planned land use and development patterns provide transit-supportive environments
2. Identify the highest-priority locations for transit-oriented development within the study area and apply mobility/hub concepts to station areas
3. Evaluate the impact of transit-supportive land use on the performance of transit alternatives

## Scope:

- Coordination with County Planning Staff
- Identification of Potential Mobility Hubs/Nodes by Type
- Existing Conditions Analysis for Station Areas (Up to 10)
- Station Area/Mobility Hub Planning for Station Areas (Up to 10)
- Development of Alternative Land Use Scenarios
- Modeling and Testing of Transit and Land Use Scenarios

# Needs Assessment

---

# Needs Statement

## Which problems are we trying to solve?

- Establishes the problems which must be addressed in the analysis
- Serves as the basis for the project goals, objectives, and preliminary evaluation measures
- Provides a framework for determining which alternatives should be considered as reasonable options in a given corridor
- Identifies and concisely states the primary transportation challenges to be addressed

# Need for Enhanced Transit

---

Needs are identified through three primary inputs:

1. Review and analysis of past plans and studies and current policy guidance
2. Assessment of existing and forecasted/desired conditions for transportation and land use
3. Engagement with the community and solicitation of public and stakeholder input

# Existing Commute Patterns

- 36% of the commute trips that start in the Study Corridor, stay in the Study Corridor
  - Includes 19% of commute trips that start and end in the same District
  - More than 60% of total trips stay within the Study Corridor
- 38% of commute trips that start in the Study Corridor (or further south) are heading to points north including Inner Fairfax, DC, Alexandria & Arlington
- 23% of commute trips that start in the Study Corridor (or further south) may be using the corridor to access the Beltway

# Enhanced Public Transportation is Needed Because ...

---

- Land Use: Growth projections for the corridor show that the corridor will increase in population and jobs.
- Equity: This corridor has a specific need to connect low-income and minority population to job opportunities
- Future Development: Existing transportation services and networks may need enhancements to support planned land uses and economic development
- Travel Markets Served by Transit: While the corridor has multiple transit options for commuting trips to the DC/Arlington core, gaps remain for intra-corridor and suburb-to-suburb trips

# Enhanced Public Transportation is Needed Because ...

---

- Connections to Activity Centers: Transit connections to key regional activity centers, such as Fort Belvoir and Quantico bases, are limited and infrequent
- Transit Service Quality and Ridership: Transit service quality is more competitive for commute trips to the core.
- Access to Transit Services: Access is reliant on park & ride or longer walks to bus routes, posing a particular challenge for transit-dependent riders
- Traffic Congestion and Travel Times: Traffic congestion is severe and continuing to get worse, resulting in slow and unreliable travel times for drivers and buses in mixed-traffic

# Poll: Transportation Enhancement Strategies

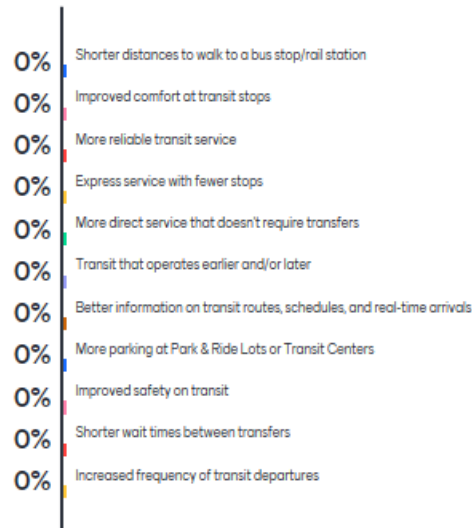

---

- Use your computer or phone and navigate to:
  - [www.Menti.com](http://www.Menti.com)
    - Type code: 7189619
- Directions:
  - Prioritization Strategy Poll
  - 10 Strategies
  - 100 Points per participant
    - Select, in groups of 10 points, how many points you prioritize each strategy
    - Can assign one strategy 100 points or each strategy 10 points

# Poll: Transportation Enhancement Strategies

Which of the following strategies have the most potential for improving the quality and access to transit service in the corridor?

# Breakout Sessions

---

# Breakout Sessions - Questions

---

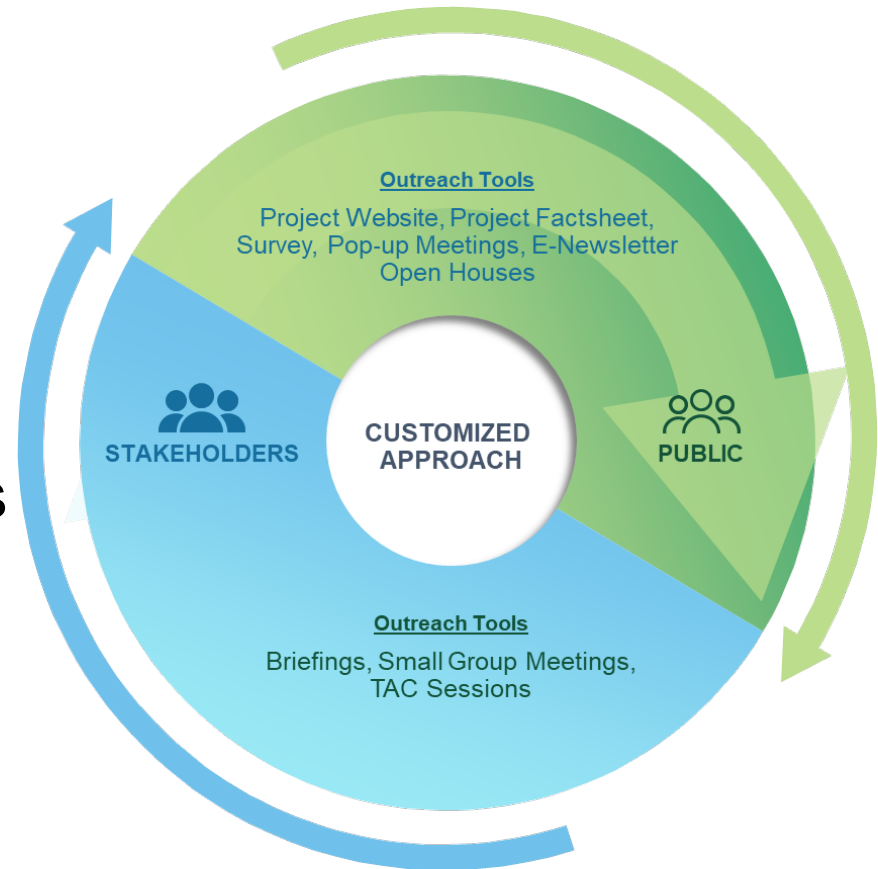

1. Did the draft needs statement capture the most critical transit enhancement needs in the corridor? Did we miss anything?
2. Which travel markets need enhanced transit the most?

# Public/Stakeholder Outreach

---

# Public/Stakeholder Outreach Status

- Elected Officials Committee:
  - Fairfax and Prince William County Board members
  - VA General Assembly
  - U.S. Congressional Offices
- Public outreach materials under development:
  - Project Factsheet
  - DRPT Website Information
  - On-Line Survey

# On-Line Survey

---

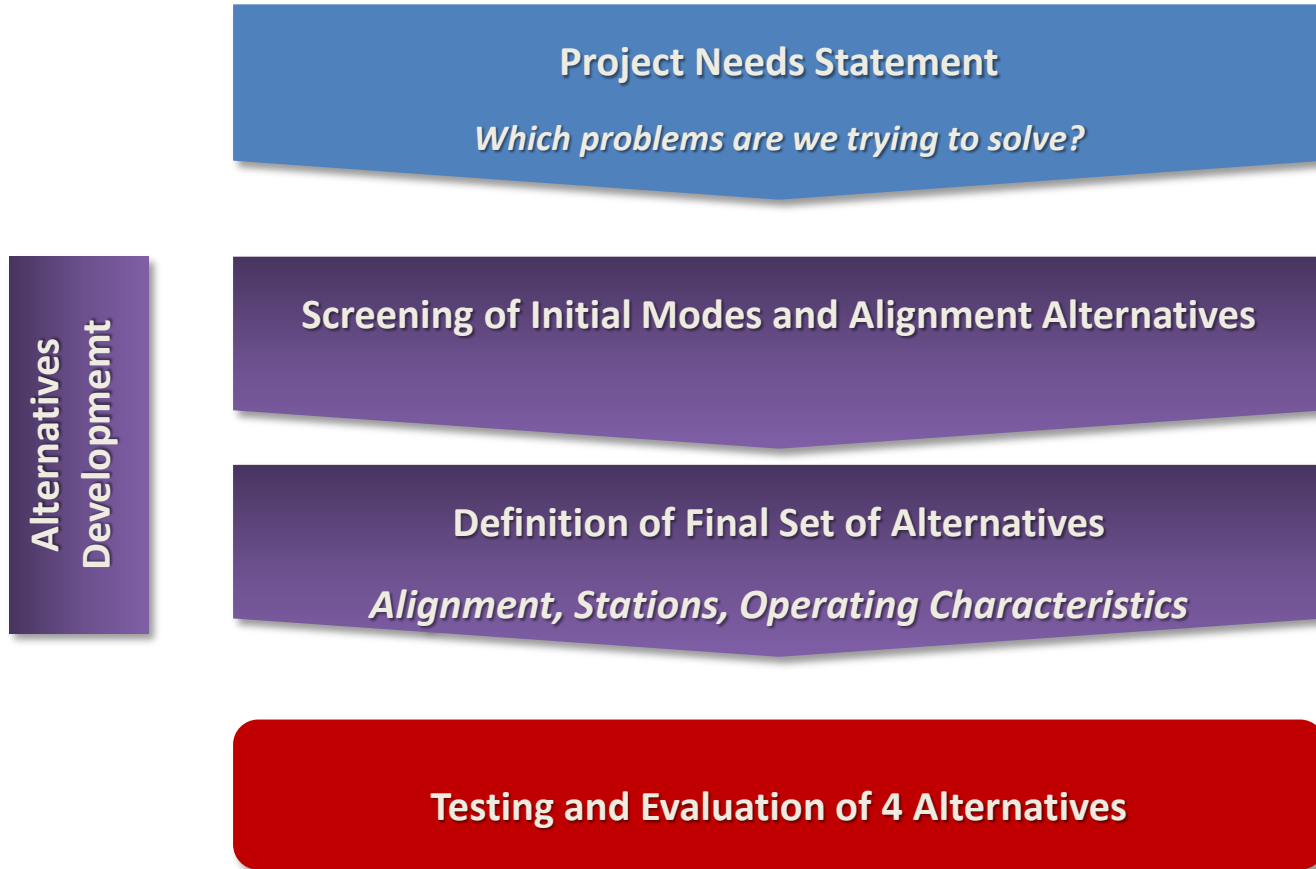

- Objectives:
  - Identify/confirm transit improvement needs in the corridor – for riders and non-riders
  - Identify changes pre-Covid vs. post-Covid
  - Assess stakeholder interest in possible transit alternatives – to help screen potential alternatives
  - Provide opportunity for other stakeholder feedback on study
- Survey Distribution:
  - Email distribution lists
  - DRPT website
  - Social media

# Alternatives Development Process

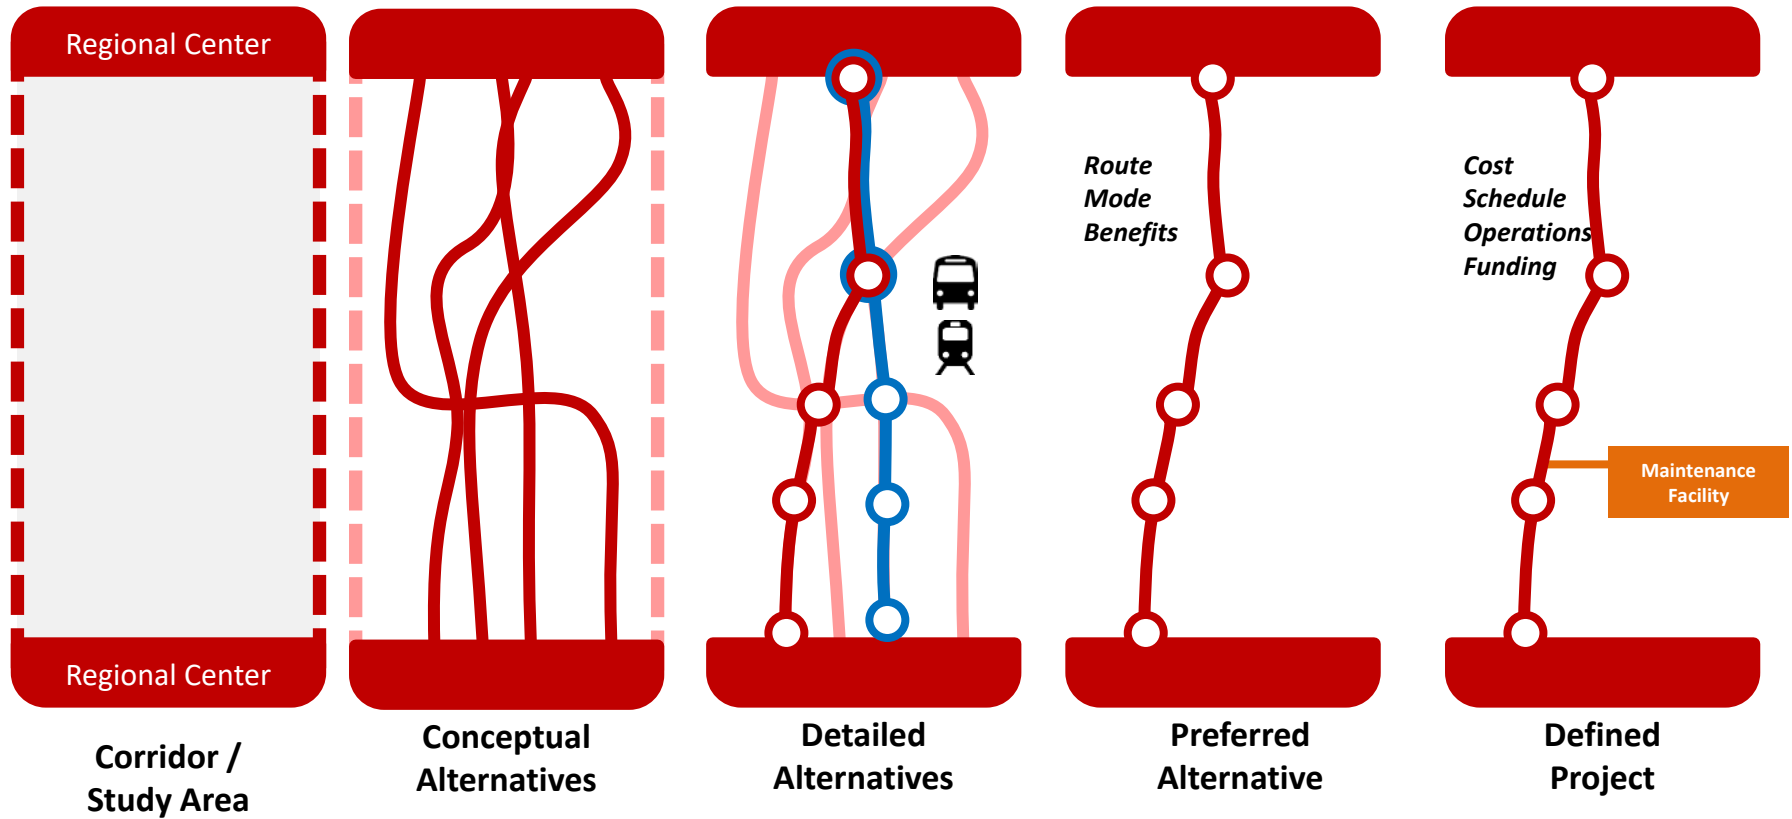

---

# Alternatives Development

# Typical Alternatives Analysis Process

# Potential Transit Modes

## Transit Modes

Light  
Rail  
Transit

Express  
Bus / BRT

VRE  
Commuter  
Rail

Metrorail  
Rapid  
Transit

- Metrorail
- Commuter Rail
- Light Rail Transit (LRT)
- Bus Rapid Transit (BRT)
- Express Bus
- Local Bus Improvements

## Screening Criteria:

- Ability to Serve Corridor Travel Markets
- Consistency of Service Levels and Capacity with Demand Profile
- Compatibility with Corridor Land Use
- Cost Effectiveness (Capital and Operating)
- Connectivity to Existing System

# Meeting Wrap-Up

---

# Schedule for Future TAC Meetings

TAC #	Month	Topics to Be Covered
5	Mar. 2021	<ul style="list-style-type: none"> <li>• Transit Alternatives Development and Evaluation Criteria (Task 7)</li> </ul>
6	Apr. 2021	<ul style="list-style-type: none"> <li>• Transit Alternatives Development (Task 7)</li> <li>• Cost/Revenue/Subsidy Methodology (Task 10)</li> </ul>
7	May 2021	<ul style="list-style-type: none"> <li>• Testing of Alternatives – Initial Results (Task 8)</li> </ul>
8	Jun. 2021	<ul style="list-style-type: none"> <li>• Testing of Alternatives – Refinements and Sensitivity Tests (Task 8)</li> <li>• Legal Considerations (Task 9)</li> <li>• Cost/Revenue/Subsidy Projections (Task 10)</li> </ul>
9	Jul. 2021	<ul style="list-style-type: none"> <li>• Summary of Transit Alternatives Results (Task 11)</li> </ul>
10	Aug. 2021	<ul style="list-style-type: none"> <li>• Draft Study Findings and Recommendations (Task 12)</li> </ul>

# Additional Slides

---

# Transit Mode Comparison (Bus)

	Typical Operations	Right-of-Way Options	Stops/ Stations	Peak Hour Direction Capacity	O&M Costs	Capital Costs	Similar Systems
<b>Enhanced Bus</b>	Headways: 5 to 20 minutes  20 mph mixed traffic, 50 to 55 mph in exclusive right-of-way	Mixed traffic; some signal priority	Distinctive shelters, signage, variable message signage  Spacing ½ to 1 mile	180 to 1,100	Low-Medium	Low-Medium	REX Charlotte Sprinter Kansas City MAX Los Angeles MetroRapid
<b>Bus Rapid Transit (BRT)</b>	Headways: 5 to 10 minutes  Up to 50 to 55 mph in exclusive right-of-way	Exclusive right-of-way with signal priority	Distinctive shelters, signage, variable message signage, TVM  Spacing 1/2 to 1 mile	300 to 2,100	Medium	Medium	CC-PY Metroway Los Angeles Orange Line Eugene, OR Emx Cleveland HealthLine
<b>Express/Commuter Bus</b>	Peak Period Headways: 10-30 mins  Up to 65 mph in freeway express lanes	Some mixed traffic; then exclusive ROW closed-door service	Park & Ride lots; stops clustered at home end and downtown	Per route: 80-240	Low-Medium	Low-Medium	OmniRide Loudoun County Bus

# Transit Mode Comparison (Rail)

	Typical Operations	Right-of-Way Options	Stops/ Stations	Peak Hour Direction Capacity	O&M Costs	Capital Costs	Similar Systems
<b>Metrorail</b>	Peak headways: 6-8 mins; Off-Peak headways: 12-15 mins  Up to 60 mph; system average of 35 mph	Fully exclusive ROW	1-2 mile spacing in suburbs	8,000 (6-min hdwy); 20,800 max.	High	High	BART MARTA
<b>Light Rail Transit (LRT)</b>	Headways: 5 to 10 minutes  Up to 60 mph maximum in exclusive right- of-way	Exclusive right-of-way with signal priority	Distinctive shelters, signage, variable message signage, TVM  Spacing 1/2 to 1 mile	1,400 to 2,800	Medium- High	Medium- High	Houston METRORail Charlotte LYNX Rapid Transit Phoenix METRO
<b>Commuter Rail</b>	Headways: 30 to 60 minutes  50 mph (average), 79 mph (maximum)	Exclusive right-of-way	Platforms, shelters, signage, TVM  Spacing 3 to 5+ miles	1,000 to 2,000	Medium	Medium	VRE Austin Capital MetroRail Trinity Railway Express
